Alumni Mentorship & Mock Interview Platform

The system should:

- monitor blood-component inventory
- monitor shelf life/expiry
- detect critical shortages
- match eligible donors
- notify compatible donors
- support emergency blood requests

DELIVERABLE 1 — REQUIREMENTS TABLE

Alumni Mentorship & Mock Interview Platform

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall recommend alumni mentors to students based on their selected domain and the mentor's area of expertise.	High	When a student requests mentor recommendations, the system identifies suitable alumni mentors.	Helps students quickly identify suitable alumni mentors.
FR-002	Functional	The system shall allow the Student Mentee to view the availability of a selected Alumni Mentor and book an available mentorship or mock interview session.	High	When the student selects an available time slot, the system successfully creates the booking and prevents the same slot from being booked again.	Provides convenient scheduling and prevents mentor double-booking.
FR-003	Functional	The system shall add a confirmed mentorship session to the Student Mentee's and Alumni Mentor's calendars and provide a meeting link.	High	After successful booking, the session appears on both calendars with the scheduled date, time, and meeting link.	Ensures both participants have the required session details.
FR-004	Functional	The system shall allow the Alumni Mentor to record structured feedback and scores using a post-	High	After a completed mock interview, the mentor can enter and submit the required scorecard information, and the	Provides a structured method for evaluating student performance.

		interview scorecard after a mock interview session.		system stores the feedback successfully.	
FR-005	Functional	The system shall allow the Student Mentee to view feedback and scorecards associated with completed mentorship or mock interview sessions.	Medium	When the student opens a completed session, the system displays the corresponding feedback and scorecard information available to the student.	Helps students understand their performance and improve their future interview preparation.
NFR-001	Non-Functional — Performance & Security	The system shall protect user profile data and feedback scorecards and shall support soft-deletion of requested data within 24 hours.	High	Under testing, unauthorized users cannot access protected profile or feedback information, and requested data is soft-deleted within 24 hours.	Protects private student and alumni information and satisfies the specified privacy requirement.
NFR-002	Non-Functional — Security	The system shall maintain acceptable response performance for mentor recommendations, availability checks, and booking operations under simulated peak load.	High	Under simulated peak usage, performance testing confirms that mentor recommendations, availability checks, and booking operations remain within the defined target response time.	Ensures the platform remains responsive when many users access it simultaneously.

DELIVERABLE 2 — UML USE-CASE DIAGRAM

DELIVERABLE 3 — USE-CASE FLOW

Use Case: UC-01 — Book Mentorship / Mock Interview Session

Primary Actor

Student Mentee

Supporting Actors

- **Alumni Mentor**
- **Calendar Service**
- **Meeting Link Service**

Preconditions

1. **The Alumni Mentorship & Mock Interview Platform is operational.**
 2. **The Student Mentee is registered and authorized to use the system.**
 3. **Mentor information and expertise details are available in the system.**
 4. **The selected Alumni Mentor has availability information recorded in the system.**
-

Main Success Scenario

1. **The Student Mentee logs into the Alumni Mentorship & Mock Interview Platform.**
2. **The Student Mentee requests mentor recommendations based on the required domain.**
3. **The system identifies Alumni Mentors whose expertise matches the student's selected domain.**
4. **The system displays the recommended Alumni Mentors to the Student Mentee.**
5. **The Student Mentee selects an Alumni Mentor.**
6. **The system displays the selected Alumni Mentor's available dates and time slots.**
7. **The Student Mentee selects a preferred available time slot.**
8. **The system checks whether the selected time slot is still available.**
9. **The system confirms that the selected time slot is available.**
10. **The Student Mentee confirms the mentorship or mock interview booking.**
11. **The system records the session booking.**
12. **The system generates or obtains a meeting link for the session.**
13. **The system adds the confirmed session to the Student Mentee's calendar.**

14. The system adds the confirmed session to the Alumni Mentor's calendar.
 15. The system displays the booking confirmation and meeting details to the Student Mentee.
 16. The Alumni Mentor receives the confirmed session details.
 17. The use case ends successfully.
-

Alternate Flow 1 — Selected Mentor Slot Already Booked

8a. The selected time slot is no longer available.

1. The system determines that the selected time slot has already been booked by another Student Mentee.
 2. The system prevents the new booking from being created.
 3. The system displays a message informing the Student Mentee that the selected slot is unavailable.
 4. The system displays other available time slots for the selected Alumni Mentor.
 5. The Student Mentee selects another available time slot.
 6. The system checks the availability of the newly selected slot.
 7. The booking process continues from Step 9 of the Main Success Scenario.
-

Alternate Flow 2 — No Available Mentor Slot

6a. No suitable time slot is available for the selected Alumni Mentor.

1. The system determines that the selected Alumni Mentor has no available time slots.
 2. The system informs the Student Mentee that no available slot is currently present.
 3. The system displays an option to select another Alumni Mentor.
 4. The Student Mentee selects another recommended Alumni Mentor.
 5. The system displays the newly selected mentor's available time slots.
 6. The use case continues from Step 7 of the Main Success Scenario.
-

Alternate Flow 3 — Meeting Link Generation Failure

12a. The system is unable to generate or obtain a meeting link.

1. The system detects that a meeting link could not be generated.
2. The system informs the Student Mentee that the meeting link could not be created.
3. The system does not mark the booking as fully confirmed until the required meeting details are available.
4. The system retries the meeting-link generation process.

5. If the meeting link is successfully generated, the system continues from Step 13.
 6. If the meeting link cannot be generated, the booking remains pending and the Student Mentee is informed.
-

Postconditions

1. The mentorship or mock interview session is recorded in the system when the booking is successfully completed.
2. The selected mentor's booked time slot is no longer available for another booking.
3. The confirmed session is added to the Student Mentee's calendar.
4. The confirmed session is added to the Alumni Mentor's calendar.
5. A meeting link is available for the confirmed session.
6. The Student Mentee receives the booking confirmation and session details.
7. The Alumni Mentor receives the confirmed session information.
